Flexcon to Showcase Industry's Least Expensive and Most Efficient Warehouse Bins at MODEX 2024

BERKELEY HEIGHTS, NJ, February 23, 2024 – Flexcon, an industry leader that has been optimizing supply chains with its wide range of totes and containers for over 50 years, will highlight their latest plastic warehouse bin collection at MODEX 2024 in booth **B6422**.

“We designed these bins to be the most efficient and least expensive in the industry,” says Ken Beckerman, president and CMO. “They ship knock-down flat, resulting in a freight cost reduction of about 80%.”

On Wednesday, March 13 at 9:30am Flexcon will hold a press conference at its main booth B6422 demonstrating the range of benefits these innovative warehouse bins offer.

Durable while also being light weight, the corrugated plastic bins are long lasting, with a high strength to weight ratio. The bins positively stack and take just minutes to assemble. When fewer bins are needed, they can be efficiently stored away flat. They can be used in a range of locations including shelving, pallet racks, pallets or even directly on the warehouse floor.

Ideal for small to medium sized products, they offer solutions for a variety of applications including retail, medical, produce, and manufacturing. In addition to over 60 standard sizes with many color choices, custom sizes are available along with ESD options and fire-retardant materials.

“Our warehouse bins combine the light weight and ship flat features of corrugated plastic with durable, long lasting, economical construction,” notes Beckerman. “They are a perfect solution to put our customers’ valuable space to work with total efficiency.”
